

United States of America

Rating report

Rating rationale

Wealthy, competitive and diversified economy: the US benefits from the largest economy globally, with high levels of wealth and significant economic diversification underpinning resilience to global economic crises. Its leadership in innovation supports medium-run trend growth.

Treasuries as the global safe asset: the US benefits from the US dollar’s role as the global reserve currency alongside Treasury’s role as the global safe asset which anchor unparalleled advantages with respect to Treasury’s funding flexibility. This is especially relevant during global economic crises witnessing safe-haven inflows to US markets and reduces risk to long-run public debt sustainability from comparatively high levels of government debt compared against many sovereigns of the same rating grade.

World-class economic institutions: the US benefits from a strong and resilient institutional framework, protecting the accountability and transparency of economic governance. The ratings are supported by world-class monetary and financial-supervisory institutions, anchoring price, financial and macroeconomic stability.

Well-capitalised financial system: the US benefits from world-class financial institutions alongside deep capital markets. The banking system displays strong profitability although moderate levels of capitalisation compared against that of many European banking systems, while the financial-oversight framework is facing challenges under the current administration.

Rating challenges: i) challenging longer-run fiscal dynamics, with budget deficits remaining elevated and public debt-to-GDP rising structurally; ii) heightened policy uncertainty and abrupt policy shifts, challenging the medium-term growth outlook and the country’s long-standing checks and balances; iii) recurring risks associated with the politicised misuse of the debt ceiling; and iv) economic and financial-stability risks amid elevated rates, financial deregulation and geo-economic uncertainties.
